

Wood's®

FOR CLEAN AND HEALTHY INDOOR AIR

PREMIUM AIR QUALITY
MADE IN SWEDEN

THE POWER OF CLEAN AIR

The brand was born with the Wood's family over 65 years ago in the Canadian city of Guelph, Ontario. This is where Wood's began developing and manufacturing dehumidifiers in 1950. Since then Wood's has helped several hundred thousand households to prevent damages from mould damp, and to breathe cleaner air.

We believe that everyone has the right to breathe air as pure as nature intended. Our passion for clean air is the foundation of Wood's and its ongoing development. After 65 years, Wood's is still carefully designed and reliable with high capacity at the lowest possible energy consumption which makes Wood's products unique. Today we produce in Sweden, where technological innovation is a must.

Premium Air Quality. Say hello to cleaner air

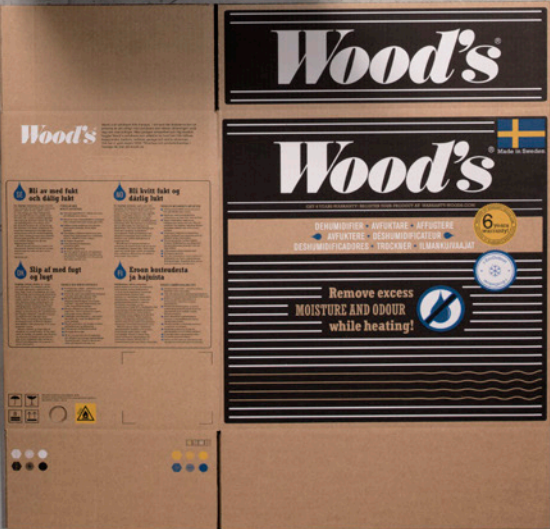

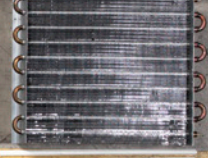

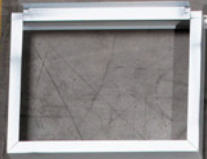

Patrik Tedsjö
CEO

What is clean air? There are many different ways to define clean air. Indoors the air can be two to five times more polluted than the air outdoors according to the U.S Environmental Protection Agency. Studies show that breathing clean air can make you healthier and improve the quality of life for you and your families.

As a company we pride ourselves on delivering customer satisfaction by developing and improving our range of products. Our products are manufactured in Sweden using state of the art environmental technology. Effective quality control allow us to deliver a product you can rely on. Our latest technological innovations resulted in lower energy consumption and an environmentally friendly cooling medium all exceeding environmental requirements of the EU. We manufacture our products according to ISO 9001/14001 standards and we are one of the first in Sweden to use environmentally friendly refrigerants for dehumidifiers.

All new models are presented in this catalog, from the SW range, DSC to air purifiers range. All products are tested individually. At Wood's customers satisfaction is guranteed, you are in safe hands.

Designed and developed for future needs

Roger Olsen
Designer

New design to Wood's SW- concept. Swedish based designer Roger Olson works as a multidisciplinary designer across the fields of spatial, lighting, furniture and product design. Quality, longevity and recycling processes are the main focus for inspiration in the design. There are many interesting and unique elements with Wood's. Swedish innovation and quality technology that work.

**Nothing has
changed
everything is
new**

Our products are manufactured in Mariestad Sweden. Mariestad is a production-rich city founded by Gustav Vasa's son, Duke Karl. This town is located next to the great lake of Vänern in the region of Västra Götaland breathes a history of great inventions.

Innovation and technical expertise, combined with unique environments and rich production heritage, this characterizes Wood's entire product range. We have a rigorous selection process for each product. Each new prototype is technologically tested and retested until ready to be placed on the market.

Made in Sweden

Healthy indoor climate

Most modern people live 80-90% of their life indoors. Indoor air quality is therefore crucial for modern living.

Moisture gives good growth conditions for mould and dust mites, and at the same time breaks down building materials. Organic materials and chemicals are released into the air, which may irritate those who are exposed to them. Moisture is one of the most important factors to keep in check in order to achieve a healthy indoor climate.

Symptoms can include irritation of the eyes, nose and upper respiratory tract, headache, fatigue, cough and skin rashes. People with hay fever and asthma are particularly sensitive.

If it is high humidity indoors. This it is often seen as condensation on colder surfaces such as windows. Condensation on windows with only one layer of glass will always occur, but it is not normal for condensation to occur on the inside of energy glazing. Condensation can also build up on the internal walls between unheated and heated living areas.

Mould and relative humidity

Mould can often be found in areas where leakages and flooding have occurred and near windows where condensation builds up. Wet cellulose materials are most supportive of mold growth, including paper products, cardboard, ceiling tiles and wood products. Wallpaper, insulation materials and upholstery are other typical launchpads for mould growth.

The organic materials become a breeding ground when the moisture content reaches an RH of 75-80%. Any moisture damage should therefore be fixed as soon as possible. If the moisture damage is left untouched for several weeks, it can result in the development of mould growth and thus the release of spores into the indoor air.

Why it is good to keep the relative humidity in homes at between 50-60%

1. Counteracts the growth of mould
2. Prevents bad odour
3. Provides for a healthy home and indoor climate
4. Reduces the risk of allergies

Next generation clean air

All air contains different contamination, in different amounts, depending on time and place. We generally do not pay enough attention to the importance of indoor air, this despite the fact that we stay indoors most of our time.

Meet the future of Wood's air purifiers designed for everyday healthy living. TALL, AL and GRAN. A new generation air purifiers.

Our range of premium air purifiers provides solutions for a healthier life for you and your family. Daily we inhale large amounts of harmful particles in our home. Indoor air is up to five times more polluted than outdoor air. Wood's air purifiers are developed by experts that have more than 150 years combined experience of clean air.

Fresh air is one of the most important conditions for life. The Swedish patented Active ION HEPA filters removes 99,98% of all pollen, dust, soot, exhaust fumes, bacteria and mould spores from the indoor air.

How it works.

The purification process used in Wood's air purifiers combines ionization of particles with our patented Active ION HEPA filters for optimized filtration. This means that Wood's doesn't have to rely on dense filters to catch particles and air pollutions. Therefore, Wood's air purifiers have very low power consumption and low noise levels. No large noisy fans are needed to circulate the air in the room.

Wood's air purifiers are Made in Sweden with the highest quality standards and are delivered with a 10 year warranty plan.

Healthier life for you and your family!

NEW STANDARD//ENVIRONMENTAL

GOOD FOR THE ENVIRONMENT-GOOD FOR THE WALLET

From 2020, the new EU directive comes into practise concerning refrigerants. We at Wood's have been working towards this goal. SW is developed with environmentally friendly cooling media while being more energy efficient and has a new unique defrosting system. 20% higher capacity and 15% more energy efficiency. Effective air purification that eliminates excess moisture and poor air. Good for the environment while providing lower operating costs.

SW

MADE IN SWEDEN

Designed, constructed and built in Sweden with Swedish components. With new technology and HFC free refrigerants, we meet the EU's forthcoming environmental directive. The Swedish SW serie is simply more powerful, efficient, environmentally friendly and durable than ever before.

Optimized metal front
Optimized for best air flow

Air outtake louvers
Product developed and designed louvers for maximum airflow

Recyclable Steel
The machine is made of recyclable and environmentally friendly steel

Environmentally friendly refrigerant
100% free from HFC gases

Construction
The wheels are designed to withstand significantly more strain.

Unique filter system
Integrated Swedish SMF filter cleans the air from mould spores and other hazardous particles.

i-EcoDefrost system
New intelligent defrosting system, developed and manufactured in Sweden. Defrosts down to + 2 ° and up to + 35 °.

Capacity
20% higher capacity.

Energy efficient
15% more energy efficient.

Reinforced bottom plate
Provides less vibrations and reduce noise.

Development and innovations in the lab

Wood's has several labs and test facilities all according to energy taxation requirements and EU standards. Making all measurements and tests takes time but ensures that each individual product manufactured has been tested and approved. Having our own labs allows Wood's to deliver dehumidifiers and air purifiers of the highest quality to customers.

Problem solving for your needs

We know that all homes differ. But whatever the circumstances, you can always choose a Wood's. Don't worry about unpleasant and damaging humidity in your home. Leave it to a dehumidifier to take care of the problem. Wood's has a wide range of dehumidifiers and we can solve your humidity problem.
